

StratoQ

Print, Scan, and Manage
in the Cloud.

Ditch your print servers and manage your copiers, printers, and users from the cloud. StratoQ is a hosted print management system that'll bring your print infrastructure into the 21st Century.

Ready to go on your copier

StratoQ runs as an embedded application on the touch panel of your copier, just like an app would on your phone. We're working with the major manufacturers to bring StratoQ to a copier near you.

Painless login

Easy and quick authentication to the copier using an ID card, the StratoQ app, or username and password. Enhance security with optional two-step authentication.

In and out from your account

Users can use the device's touch screen to print from and scan to Google Drive™, as well as send documents as email attachments from their accounts.

Who, what and when

Set access roles and quotas, audit usage, and run reports on how much each user prints and scans. Reduce costs and keep an eye on your device fleet, all from an easy-to-use web dashboard.

No mad dash for printouts

Submit jobs to one global virtual queue and release right from your copier's touch screen. You can even change settings at the device before printing it.
